## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chang (6,647,819) in view of Japanese Patent Publication No. JP-2-16698.

Regarding claim 1, Chang discloses a vehicle ceiling mounted LCD display device showing a main body housing mounted to the ceiling (Figure 1), a display housing pivotally mounted to the main body housing (20), an inherently included connecting member (such as cables or wires), and an inherently included insertion hole or holes on the display housing for receiving the connecting member. Chang does not disclose the connecting member covering member as claimed. JP-2-16698, from the similar field of endeavor, teaches such covering member (10-12). By using such covering member, the wirings connecting in between the rotating LCD monitor and the base unit are well concealed which can be very unsightly otherwise. Since the display monitor in Chang is also rotating around the base unit, the wirings would nonetheless expose when the monitor is rotated to an open position. In order to conceal the exposed wirings, it would have been obvious to one of ordinary skill in the art at the time that the invention was made to include the covering member of JP-2-16698 into Chang so that the unsightly wirings could be covered.

Application/Control Number: 10/579,833 Page 3

Art Unit: 2622

Regarding claim 2, Chang does not disclose that the insertion hole is formed by raising and cutting the display housing as claimed. In any event, JP-2-16698 shows that the cable is hooked by the edge of the housing (Figure 2) which effectively tightens the wires. Hence, it would have been obvious to one of ordinary skill in the art at the time that the invention was made to include a wire tighten means, such as taught by JP-2-16698, into Chang if the wirings ever become too slacken.

## Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ishizuka (JP11127403) shows a cover means.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to M. Lee whose telephone number 571-272-7349. The examiner can normally be reached on Monday through Thursday from 9 to 6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Sinh Tran, can be reached on 571-272-7564. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should
